Wind Sensor Control

Features

Yeadon's proprietary WIND SENSOR provide Air Structures with the most up-to-date sophisticated controls available, to maintain the interior dome pressure and temperature at the most cost effective levels in almost any weather conditions. The Yeadon Wind Sensor Control has been designed by Yeadon specifically for it's Air Supported Structures, and allows for modem monitoring from remote locations.

Yeadon® Wind Sensor Control

Yeadon's Wind Sensor Control is ideal for structures over 25,000 square feet in floor area, to automatically increase or decrease the structure's interior pressure set point to accommodate for the outside wind speed and weather conditions, while providing Yeadon Air Structure owners with the lowest possible energy costs.

Yeadon® Wind Sensor Control can be installed on new as well as existing Yeadon Air Structures.

Features

- 7 Day timer for pressure setback & temperature control to save energy
- Minimum manual adjustment of the dome controls
- On pressure loss, automatically increases fresh air intake to assist the standby fan
- Remote monitoring available with modem connection
- Year Y2K compliant
- Manual override to allow for manual operation
- Status lights for fans, burner, standby fan, air conditioning and pressure indicator
- Automatically increases interior dome pressure to maintain correct dome stability
- Wind Speed Indicator can be mounted on the dome.
- Snow Sensor available as an option.
- Alarm notification to pager, cel phone or PC is available as an option
- 24 Hr. status report printout is also available as an option
